Dashboard Design Assessment

Health Analytics & Risk Insights

Date	**28 October 2026**
Team ID / Enrollment No.	**EN25CS3011166**
Project Name	**Health360 & Analytics Interactive Dashboard**
Maximum Marks	**5 Marks**

Activity 1: Interactive and Visually Appealing Dashboards

Creating an effective analytics dashboard involves presenting business and health datasets stored in Snowflake/Tableau through clear, interactive, and actionable visualizations. Students design the dashboard so users can rapidly interpret critical KPIs, multi-variable correlation trends, risk factors, and comparative insights.

- Clear and Intuitive Layout
- Use Appropriate Visualizations
- Colour and Theming
- Custom Visuals and KPI Cards
- Interactive Filters and Slicers
- Drill-Down Capabilities
- Responsive Layout Design
- Use of Infographics & Heatmaps

Major Analysis Outcomes & Key Insights

1. **Age and Cardiac Risk Correlation:** The Age-Based Cardiac Risk Trends demonstrate a notable upward curve starting around age 55–60, showing that cardiac risk score peaks significantly in older patient demographics.
2. **Cholesterol & Blood Pressure Impact:** Continuous multi-bar plots reveal that higher blood pressure readings (>140 mmHg) and elevated cholesterol levels consistently correlate with increased average heart disease probability.
3. **Lifestyle Factors (Alcohol & Smoking):** Comparative risk metrics highlight that combined alcohol consumption and active smoking behaviors substantially elevate the overall health risk index compared to non-consumption baselines.
4. **Symptomatic Markers (Chest Pain & Dizziness):** Patients exhibiting chest pain and dizziness markers register higher emergency risk indicators, serving as crucial parameters for predictive clinical triage.
5. **Overall Dashboard Synthesis:** The unified Health360 dashboard effectively integrates multiple patient health metrics—combining linear trend charts, risk heatmaps, and categorical bar charts—to enable data-driven clinical decision-making.

Visual Dashboard Implementations & Analytics
